No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description

US-09-103-840A-2/C
US-09-103-840A-2/C

Sequence 2, Application US/09103840A

Patent No. 6294328

GENERAL INFORMATION:

APPLICANT: FLEISCHAMN, Robert D.

APPLICANT: FLEISCHAMN, Robert D.

APPLICANT: WHITE, Owen R.

APPLICANT: WINTER, John C.

TITLE OF INVENTION: DNA SEQUENCES FOR STRAIN ANALYSIS IN MYCOBACTERIUM

TITLE OF INVENTION: TUBERCULOSIS

FILE REFERENCE: 24366-20007.00

CURRENT APPLICATION NUMBER: US/09/103, 840A
